

THE NEURALNET

Cerebral Palsy Pilot Study

The NeuralNET: Research to impact diagnosis, mechanistic understanding and treatment of children's brain and mental health disorders – A pilot study in cerebral palsy

Information to be read and
discussed with children at
Preschool level

HELP

We would like to ask for your help
with our project.

You have something called
cerebral palsy.

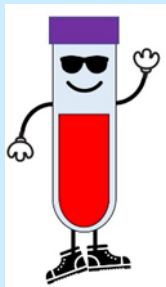

We want to find out if there is a
reason why you have cerebral
palsy.

This might help you, and it might help other children as well.

What happens if you join our project?

We will take a little bit of blood from your arm.

We will ask your mummy, daddy or the person who looks after you to answer some questions on the computer.

If you don't want to join our project, you can say
"No, thank you!"

Do you have any questions? You can ask your mummy, daddy or the person who looks after you. You can also ask one of the people taking care of you at the hospital.

Thank you for reading this
